

ARI AWALUDIN

Fullstack Software Engineer

Kab. Serang, Banten | 085893707918 | ariawl0209@gmail.com

[linkedin.com/in/ariawaludin](https://www.linkedin.com/in/ariawaludin) | github.com/AriHyuk

PROFESSIONAL SUMMARY

Fullstack developer accustomed to owning projects end-to-end, from zero to deployment — from a multi-vendor marketplace (LabShare, a thesis project partnered with UNPAM's Sharia Economics department) to a multi-agent AI project for academic research (Researcher AI, a reviewer-writer-validator architecture built on Vertex AI). Experienced working with freelance clients on requirements that evolve mid-project, from initial needs discussion through deployment. Holds a BNSP (Indonesian national) competency certification in Programming, with leadership experience as Vice Head of Research & Technology at HIMTIF and as a hackathon speaker/judge.

SKILLS

Programming Languages: PHP, JavaScript/TypeScript, Go, Python

Frameworks & Libraries: Laravel, React.js, FastAPI, Next.js, Tailwind CSS

Database: MySQL

AI & Cloud Infra: Vertex AI (multi-agent pipeline), Docker, VPS deployment

Testing: Cypress (E2E), Playwright (E2E)

Familiar / Exploring: Kotlin, NestJS, PostgreSQL

WORK EXPERIENCE

Fullstack Developer (Internship)

PT Fajar Putra Cikande | March 2025 – June 2025

- Worked in a 3-person team with per-module task division — each member owned one full module, from database and controller/logic to the UI.
- The project did not reach production hosting, as the company chose to keep its existing WordPress site; all modules were fully developed and tested locally.

Freelance Fullstack Developer — Kundalini

Multi-category e-commerce | August 2025 – January 2026

- Built an end-to-end e-commerce platform for multiple business categories (perfume, pet products, hijab/fashion, F&B) covering inventory, transactions, and sales reporting. Project value: IDR 10 million.
- Wrote automated tests with Cypress covering nearly all core features, including positive and negative scenarios.

Backend Developer — Siju Shop (Team)

Multi-merchant marketplace | November 2025 – Present

- Developed the backend/API for a multi-merchant marketplace, including manual distance-based matching logic for the "Shijuman" feature — a campus pickup-and-delivery service connecting buyers with couriers.
- Integrated the Midtrans payment gateway with automatic payment status updates via callback.

ACADEMIC PROJECTS & PORTFOLIO

LabShare — Multi-Vendor Marketplace (Thesis)

Universitas Pamulang, partnered with the Sharia Economics department | 2025 – Present

labshare.unpam.ac.id

- Built a multi-vendor marketplace with an installment/cicilan feature (Laravel + React.js), letting vendors manage their own products independently. Supervised by Joko Riyanto, S.Kom., M.Kom.

Researcher AI — Multi-Agent Research Assistant

Personal/research project

- Built a research assistant that mines existing journals for new keywords/terms, using a layered multi-agent architecture (reviewer, writer, validator) powered by Vertex AI.
- Migrated the frontend from Streamlit (Python) to React + FastAPI after hitting limitations with the Streamlit-based UI. Deployed with Docker on a campus VPS (*.unpam.ac.id subdomain).

Personal Projects:

- go-finance (Go, Gin) — personal finance tracker with balance top-up & transfer features. github.com/AriHyuk/go-finance

- Smart Tourism App (Kotlin) — tourism app for foreign visitors, with destination photos & maps.
github.com/AriHyuk/Smart-TourismAPP
- Portfolio (Next.js, Tailwind, TypeScript) — personal site in a neobrutalist style with Playwright E2E tests.
ariawaludin.vercel.app
- CronPay (Kotlin) — finance app for students living off-campus, tracking recurring subscriptions.
- Speaksy (React, Web Speech API) — speech-training app for children with special needs, using Levenshtein Distance to match pronunciation.

ACHIEVEMENTS & ORGANIZATIONS

- 1st Place Best Final Project, 1st Place UI/UX category (team), 1st Place Product Manager category (team), and 2nd Place Frontend category (individual) — a product competition within a campus tech community's weekly class program.
- Speaker & Judge, Hackathon 2026 "Innovating Beyond in the Code!" — Universitas Pamulang/HIMTIF, June 2026. Delivered a UI/UX session ("Design is a Decision, Not Decoration") and judged ~9 projects using a structured rubric.
- HIMTIF — Member (Feb 2024–2025) → Vice Head of Research & Technology (Feb 2025–2026).
- GDGoC — Active Member (2024–Present), active in cross-disciplinary tech community sessions.

EDUCATION

B.S. in Informatics Engineering

Universitas Pamulang | 2022 – 2026

GPA 3.53/4.00

Thesis project: LabShare — multi-vendor marketplace with an installment feature, supervised by Joko Riyanto, S.Kom., M.Kom.

CERTIFICATIONS

- BNSP Competency Certificate — Programmer, Universitas Pamulang Professional Certification Body (LSP UNPAM). Issued February 13, 2026, valid through February 13, 2029.
- TOEFL Prediction Test — Score 373 (Level: Beginner), Universitas Pamulang Language Institute. Issued December 2025, valid through December 22, 2027.

TRAINING

- UNPAM Informatics Engineering Short Course (January 12–16, 2026) — 5 topics: Full Stack Apps, Generative AI Concepts & Ethics, Career Readiness, Software Engineering, Digital Identity & Blockchain Careers.
